AquaFitness Bike

Our company has been founded in 2008 in Poland (Europe). We have started with creating metal prototypes for customers. First project was astronomical observatory. It gave us experience in creating big and complicated products. Due to economical crisis we had received task to make this project from start but less expensive and less complicated. We found out that simple solutions usually last longer and have more power. Since we were fascinated by fitness world we decided to do the same with products available on market. We took stationary bike and created product which could work in water environment. After testing we showed it to market.

It was 2010 when our company created fitness division which only task was to invent new products for AquaFitness. During 4 years we created many projects but our top year was 2016. This year we showed to the world our innovative solutions. On FIBO exposition we presented first on the market folding AquaBike and AquaStepper with regulated resistance. Day by day we gained new clients and new distributors. By the end of year we are available on 30 markets all over the world. It has been 7 years already and we have not stopped creating new solutions.

ALEX AQUABIKE

Equipment designed for amateur use with normal level muscle strengthening.

LEGS

Single machine workout for greater leg strength, size and power.

CARDIO

Cardiovascular exercise for increasing stamina.

FLEXIBILITY

Aqua training improves joints flexibility.

DRAINAGE

Enhance not only the blood circulation, but also the lymph flow.

Profiled saddle with EVA antibacterial foam.

Pedals with built-in resistance for use with bare feet.
